

ALOYSIOUS KABONGE

Fredericksburg, VA | aloysious310@gmail.com | [LinkedIn](#) | [GitHub](#) | [ProofMode](#)

PROFESSIONAL SUMMARY

AI Engineer specializing in trustworthy, production-aware AI systems: Retrieval-Augmented Generation (RAG), LLM evaluation and guardrails, agentic workflows, and privacy-aware ML pipelines. Experience spans financial services member analytics (Navy Federal Credit Union), enterprise compliance AI, and secure full-stack platforms, with growing depth in Microsoft Azure and Azure DevOps (CI/CD).

TECHNICAL SKILLS

AI / LLM: Retrieval-Augmented Generation (RAG), embeddings, vector search, prompt engineering, LLM evaluation, hallucination/faithfulness testing, guardrails, schema-validated (structured) outputs, agentic/multi-agent workflows. **Languages & Frameworks:** Python, SQL, R, JavaScript/TypeScript, FastAPI, Next.js, Django, Streamlit, SQLAlchemy, pandas, matplotlib
Cloud & MLOps: Microsoft Azure, Azure DevOps (Repos, Pipelines, Boards), CI/CD, AWS Bedrock, Amazon Macie, Docker, Git/GitHub, GitHub Actions, Render
Data & Analytics: Databricks, PySpark, PostgreSQL, Pinecone, ChromaDB, OpenAI API, Anthropic Claude, Power BI, Excel

PROFESSIONAL EXPERIENCE

Executive Support & Innovation Intern – Flatter, Inc.

Spotsylvania County, VA | Jul 2026 – Present

- Research, evaluate, and pilot emerging technologies, including AI tools, to streamline workflows in Microsoft Azure and Azure DevOps, translating business needs into technology recommendations.
- Contribute to building compartmentalized agentic AI workflows with governance controls, automating tasks and targeting a 90% improvement in workflow efficiency.
- Build CI/CD pipelines in Microsoft Azure DevOps and contribute to frontend development using JavaScript, HTML, and Vue.

AI/LLM Engineer Intern – SyncData.ai

Remote | Dec 2025 – Apr 2026

- Designed LLM-assisted architecture for the Fisherman compliance pipeline, using LLMs for summaries, explanations, and next steps while keeping classification and evidence deterministic, auditable, and governance ready.
- Built an LLM evaluation and gating framework testing schema adherence, faithfulness, hallucination risk, privacy leakage, and prompt-injection resistance before outputs reached compliance workflows.
- Recommended model and deployment strategies across AWS Bedrock + Anthropic Claude, OpenAI Structured Outputs, and customer-hosted options for enterprise-sensitive workloads.
- Implemented PII/PHI workflow controls using AWS Bedrock and Amazon Macie for detection, guardrails, and evidence-aware compliance processes.

Business Intelligence Analyst Intern – Navy Federal Credit Union (Member Strategy Office)

Vienna, VA | May 2025 – Aug 2025

- Processed and analyzed high-volume credit and debit card transaction data in Databricks and PySpark to identify Permanent Change of Station (PCS) movement patterns for Active-Duty members.
- Built Power BI dashboards and Excel validation checks to communicate member-support insights, data-quality findings, and strategic recommendations to leadership.

Data Strategy & Analysis Intern – Banduri, LLC

Fredericksburg, VA | Jan 2025 – Apr 2025

- Led 30+ customer discovery interviews and mixed-method market research to validate problem solution fit and inform roadmap decisions.
 - Applied Banduri's Change Architecture framework to identify healthcare pain points, define customer segments, and support product strategy; delivered final findings to faculty, executives, and stakeholders.
-

AI/ML PROJECTS

ProofMode – Secure Proof-of-Process Platform – Next.js, FastAPI, PostgreSQL, Docker

Spring 2026

- Built a pilot-ready platform helping students document their writing process through checkpoints, revision activity, and reflections — positioned around proof-of-process rather than AI detection.
- Implemented security architecture: Argon2 hashing, HttpOnly/SameSite JWT cookies, CSRF protection, ownership-based authorization, field-level encryption, and revocable share tokens.

FCC Emergency Alert RAG Platform – Python, OpenAI, Pinecone, ChromaDB, Streamlit

Fall 2025

- Engineered a full-lifecycle RAG pipeline for emergency-alerting documents: source acquisition, text cleaning, JSONL training/eval corpus creation, validation/repair, embeddings, and vector storage.
- Migrated retrieval from local ChromaDB to Pinecone serverless with text-embedding-3-small embeddings; built Streamlit and CLI chat interfaces for document-grounded responses.

EDUCATION & LEADERSHIP

B.S. Data Science – University of Mary Washington

Fredericksburg, VA | Graduated 2026

Leadership: Resident Assistant; Orientation Leader; Habitat for Humanity Team Lead
